SUBJECT: New clarifications regarding the repetitive tender for the procurement of Verified Gross Mass (VGM) systems for Rail Mounted Gantry (RMG) Cranes and Straddle Carrier (SC) Cranes, situated in Pier I Container Terminal of Piraeus Port Authority S.A.

Interested parties are kindly requested to refer to all clarifications published provided by PPA, in relation to the subject tender.

Question 1:

“Regarding CATOs integration I still have more doubts:

Offered system generates an output through RS232, RS485 or Ethernet, but wireless/telemetry link is not supplied. Does those machines have already implemented CATOS system and have already installed this required wireless/telemetry link? If it is already implemented... Is this system open to get this signal and re-send to base station? If not implemented, I suppose that we shall provide this wireless/telemetry link, Any preference about that? How far do you expect us to reach? I mean, usually this kind of systems are managed by customer IT department. What exactly do you need?”.

Answer 1:

PPA's cranes already have a CATOS system installed, candidates are requested to connect their systems either hardwired or wireless to the CATOS system and then function test the system together with PPA engineers to check that CATOS system is receiving the correct information.
